

### **In the Abstract:**

~~Method for fabricating an integrated pin diode and associated circuit arrangement~~

~~An explanation is given of, inter alia, a method for fabricating an integrated pin photodiode which contains a buried region (20) and a terminal region (32) leading to the buried region (20). This fabrication method enables the pin photodiode (14) to be integrated in a simple manner. Moreover, there is the possibility that process steps for fabricating the pin diode can also be utilized for fabricating shielding wells (22, 56).~~
